PRICING UPDATE BRIEF · FOR CLAUDE CODE · SCOPE = /#PRICING ONLY

TimeBookingPro — pricing section update

Replace the 3-tier overage model currently live at **timebookingpro.com/#pricing** with the new 4-tier hard-cap model. Everything outside the pricing section stays.

v3 · 23 Apr 2026 · Canonical source: `dashboard-sooty-seven-64.vercel.app/dashboard` → Settings → Subscription

> **Scope for your Claude:** edit the pricing section only (the block that renders under `#pricing`). Do **not** touch the hero, features, testimonials, footer, brand styling, or any copy that isn't tier data or pricing microcopy. If pricing data lives in a JSON/TS constant, edit the constant, not the JSX.

What changed at a glance

ASPECT	LIVE NOW (TIMEBOOKINGPRO.COM)	NEW (THIS BRIEF)
Tier count	3 — Starter / Professional / Enterprise	4 — Light / Standard / Busy / Heavy
Entry price	€229/mo, 200 min	€99/mo, 100 min
Billing model	Included minutes + **overage** (€0.40–0.60/min)	**Hard cap** — no overage, voicemail when exhausted
Locations	Sold as a feature (1 / up to 3 / unlimited)	**Remove entirely.** Not a billable dimension.
Support tiers	Email / Priority / Dedicated success manager	**Remove.** All plans get the same support.
CTA on top tier	"Book a demo" (Enterprise)	"Start with Heavy" — all 4 tiers self-serve.
Microcopy under grid	"Overage minutes billed at the per-tier rate shown."	Hard-cap explainer + usage alerts at 75% / 90%.
Yearly discount	20% — keep as-is.	20% — unchanged.

The new 4 tiers (all figures EUR, authoritative)

PLAN	MONTHLY	YEARLY TOTAL	YEARLY AS /MO	MINUTES / MO	€ / MIN	SELF-SELECT PROFILE	CTA LABEL
Light	€99	€950	€79	100	€0.990	Small or quieter business — ~3 calls/day	Start with Light
Standard MOST POPULAR	€179	€1,718	€143	250	€0.716	Busy single location — ~8 calls/day	Start with Standard
Busy	€299	€2,870	€239	500	€0.598	High volume or a couple of locations — ~15 calls/day	Start with Busy
Heavy BEST VALUE	€499	€4,790	€399	1,000	€0.499	Multi-location or very high volume — ~30+ calls/day	Start with Heavy

Toggle default = **Monthly**. Yearly shows **"-20%"** chip next to the label (same as current UX). When Yearly is active, render the "Yearly as /mo" value with a small secondary line like "billed €1,718/yr."

Per-tier feature bullets (use exactly these — and no others)

Replace the current feature lists wholesale. Every tier shows the same 4 bullets — only the minutes line changes per tier. **No location line. No support-tier line. No overage line.**

- **Minutes** — tier-specific: "100 min/month", "250 min/month", "500 min/month", "1,000 min/month".
- Bookings synced to your calendar
- Weekly performance email
- Call recordings on demand
- All 7 supported languages (Greek · English · Spanish · Portuguese · French · German · Arabic)

Remove / add — copy-level diff

REMOVE

- "1 location" / "Up to 3 locations" / "Unlimited locations"
- "Email support" / "Priority support" / "Dedicated success manager"
- "€1.15/min included" / "€0.72/min included" / "€0.54/min included" — the per-min figure itself is fine to **show** somewhere, but not as a "feature" bullet.
- "Overage €0.6/min" / "Overage €0.5/min" / "Overage €0.4/min"
- "-38% /min vs Starter" / "-25% /min vs Professional" — replace with the new savings deltas below.
- "Overage minutes billed at the per-tier rate shown above."
- The "Book a demo" CTA on Enterprise.

ADD / REPLACE WITH

- 4th tier card: **Heavy**, €499/mo, 1,000 min. Takes over "Best value" badge (currently on Enterprise).
- Rename first three: **Starter** → **Light**, **Professional** → **Standard**, **Enterprise** → **Busy** (then Heavy is the new top).
- Standard keeps "Most popular" badge.
- New per-tier CTA = **"Start with {Plan}"** — all 4 self-serve. No "Book a demo."
- Savings microline (optional, if you keep it): **"–28% /min vs Light"** on Standard · **"–16% /min vs Standard"** on Busy · **"–17% /min vs Busy"** on Heavy.
- New microcopy under grid: see "Microcopy replacement" below.
- New FAQ entry (the hard-cap question) — see "FAQ additions" below.

Microcopy replacement (under the pricing grid)

Lift verbatim: All plans include bookings synced to your calendar, a weekly performance email, call recordings on demand, and all 7 supported languages. Minutes are a hard monthly cap — calls route to voicemail once the bucket is spent until the next billing cycle or an upgrade. You'll get email alerts at 75% and 90% of your bucket so you're never surprised. Prices shown ex-VAT — tax calculated at checkout.

The current "🇬🇷 Taxes shown for Greece — VAT charged locally…" line can stay if you're already geo-swapping it. If not, use the generic "Prices shown ex-VAT — tax calculated at checkout" from the lift above.

FAQ additions (add at least the first — rest optional)

QUESTION	ANSWER
What happens when I run out of minutes? required	Your bill stays flat — we don't charge overage. New calls route to voicemail until the next billing cycle or an upgrade. You'll get email alerts at 75% and 90% of your bucket so you're never surprised.
Can I use one plan across multiple locations?	Yes. Minutes are a single pool you can use across any number of locations — we don't track or limit where they're spent. Pick the plan that matches your total monthly call volume.
What if my volume changes month to month?	Upgrade or downgrade any time from the weekly email — changes prorate against the current cycle.
Which languages does the agent speak?	Greek, English, Spanish, Portuguese, French, German, and Arabic. The agent locks to the caller's language on the first substantive word of the call.
Can I cancel any time?	Yes — no setup fees, no contracts. Cancel from the weekly email or your account. (This matches your existing "Cancel any time" line in the heading.)

Machine-readable (parse this, don't retype)

Step-by-step for the receiving Claude

1. Locate where tier data is defined. Likely a TS/JS constant (e.g. `plans.ts`, `pricing.ts`, a CMS entry, or inline in the pricing component). Grep for `Starter` or `"€229"`. Edit the data source, not the JSX.
2. Replace the tier array with the 4 tiers in `PRICING_JSON.tiers`. Preserve the existing monthly/yearly toggle UX — only the numbers and tier names change.
3. Delete any fields listed in `PRICING_JSON.removedFields` from the data model and from the card JSX. Prune any now-dead code paths.
4. Update the per-card feature list to render only `PRICING_JSON.featuresOnEveryPlan` (prepending the tier-specific minutes line).
5. Swap the CTA text to `tier.cta`. All 4 tiers self-serve — no "Book a demo" on any tier.
6. Replace the microcopy under the grid with `PRICING_JSON.microcopy.underGrid`.
7. Add the "What happens when I run out of minutes?" FAQ entry (required). The other FAQ entries in this brief are recommended but optional.
8. Run the existing typecheck + lint + whatever build step your repo has. Open a PR — don't push straight to main.
9. Compare the grid visually against `dashboard-sooty-seven-64.vercel.app/dashboard` → Settings → Subscription (the dashboard is our canonical source).

Paste this block into the landing-page repo's CLAUDE.md

```
## Pricing — constraints (do not drift)

# Canonical source: https://dashboard-sooty-seven-64.vercel.app/dashboard
# Settings → Subscription. If this CLAUDE.md disagrees with that page,
# the dashboard wins. Request an updated handoff PDF before changing prices.

- 4 tiers, EUR: Light €99 · Standard €179 · Busy €299 · Heavy €499 (monthly).
- Minutes per month: 100 / 250 / 500 / 1,000. Hard cap — NO overage, ever.
- Yearly = flat 20% off monthly. Toggle defaults to Monthly.
- Badges: Standard = "Most popular"; Heavy = "Best value". No other badges.
- Per-card feature list = exactly 5 bullets (minutes + 4 shared). Nothing else.
- DO NOT add "locations", "support tier", "overage rate", or "per-min included"
  as feature bullets. These are not part of the pricing model.
- DO NOT write "up to X minutes" — write "X min/month".
- DO NOT invent discounts. Any promo code must come from the canonical source.
- Show prices ex-VAT with "Prices shown ex-VAT — tax calculated at checkout."
- All 4 tier CTAs are self-serve Stripe Checkout — no "Book a demo" CTA on
  any tier. Book-a-demo belongs on the top-nav, not in pricing.
```

Our side lives at `dashboard-sooty-seven-64.vercel.app`. Source files: `lib/pricing.ts`, `lib/currencies.ts`, `lib/vat.ts`. If you need non-EUR price tables (GBP / USD / JPY / 9 more), reply and we'll attach `currencies.json`. Don't FX-convert at runtime — we hand-round for local psychology.

Reply on the shared thread with questions or any drift you spot. This PDF is regenerated from `agent/docs/pricing-handoff.html` whenever pricing or promos change.
