PRICING HANDOFF · BRIEF FOR YOUR CLAUDE CODE

Kostas — landing-page spec

Everything another Claude needs to ship the pricing section without asking us.

v2 · 23 Apr 2026 · Canonical source: `dashboard/lib/pricing.ts` (ours)

> **For the Claude Code picking this up:** all tier data, copy strings, and guardrails below are load-bearing. The *exact strings* in quoted blocks are meant to be used verbatim. The `PRICING_JSON` block on page 2 is machine-readable — parse that, don't retype the numbers. If a value here ever disagrees with our live app at `https://dashboard-sooty-seven-64.vercel.app/dashboard` → Settings → Subscription, the **app wins** — flag it and we'll reissue.

What we sell (one sentence)

Kostas is an AI voice receptionist for barbershops — the shop forwards their phone line to us, Kostas answers in 7 languages, takes the booking, and drops it into the owner's calendar. We bill flat monthly by **included voice minutes**, in 4 tiers. No overage, no top-ups, no per-location fee.

The 4 tiers

PLAN	MONTHLY	YEARLY (−20%)	YEARLY AS /MO	MINUTES / MO	€ / MIN	SELF-SELECT PROFILE
Light	€99	€950	€79	100	€0.990	Quieter shop — ~3 calls/day.
Standard MOST POPULAR	€179	€1,718	€143	250	€0.716	Busy shop — ~8 calls/day.
Busy	€299	€2,870	€239	500	€0.598	High-volume or small multi-shop — ~15 calls/day.
Heavy BEST VALUE	€499	€4,790	€399	1,000	€0.499	Multi-shop or very high volume — ~30+ calls/day.

Per-minute price drops at every step. Yearly = flat 20% off monthly. Show prices **ex-VAT** with the microcopy "*+ tax calculated at checkout*". Default display currency = EUR; see the multi-currency table below if you want geo-swap.

Copy strings to lift verbatim

SURFACE	COPY
Hero headline (option A)	Your barbershop's phone, answered.
Hero headline (option B)	Never miss a booking again.
Hero sub	Kostas answers your phone in 7 languages, takes bookings, and drops them straight into your calendar. Flat monthly bill. No surprise charges.
Primary CTA	Try Kostas live (opens the ElevenLabs widget — see "Widget embed" below)
Secondary CTA	See plans
Pricing section title	One flat bill. Exactly the minutes you need.
Pricing section sub	Pick the plan that matches your call volume. Upgrade any time from the weekly email.
Per-tier CTA	Start with *{Plan}* — link to Stripe Checkout (coming, see "Integration")
Under the grid (microcopy)	All plans include bookings synced to your calendar, a weekly performance email, call recordings on demand, and all 7 supported languages. Prices shown ex-VAT — tax calculated at checkout.
Hard-cap explainer (FAQ)	**Q:** What happens when I run out of minutes? **A:** Your bill stays flat — we don't charge overage. New calls route to voicemail until the next billing cycle or an upgrade. You'll get email alerts at 75% and 90% of your bucket so you're never surprised.

Copy guardrails (instructions to your Claude)

DO

- Lead with **calls answered, bookings made**, not "minutes."
- Name tiers by volume (*Light* / *Standard* / *Busy* / *Heavy*) so owners self-match.
- Frame the hard cap as a **feature** ("flat bill, no surprises").
- Mention the 7 languages — real wedge in Athens / tourist zones.
- Badge Standard = **Most popular**, Heavy = **Best value**.

DON'T

- **Don't** mention "unlimited locations" or "multi-shop support" — locations aren't a billable dimension, mentioning it invents a limit-shaped worry.
- **Don't** promise overage, top-ups, or pay-as-you-go. The cap is deliberate.
- **Don't** show a per-call price. We sell minutes.
- **Don't** write "up to 100 minutes" — write **"100 min/month"**. "Up to" reads like a cap the customer won't actually hit.
- **Don't** invent your own discount — promos are in the canonical JSON, only use those codes.

Machine-readable pricing (parse this, don't retype)

}
```

If you need the non-EUR price tables (local round numbers for GBP / USD / JPY / etc.), tell us and we'll attach a `currencies.json`. Don't FX-convert at runtime — we hand-round for local psychology (£159 / $199, not £154.23).

Integration spec

ELEVENLABS WIDGET (FOR THE "TRY IT LIVE" SECTION)

```
<!-- Drop once on the page; widget self-mounts. -->
<script src="https://unpkg.com/@elevenlabs/convai-widget-embed" async type="text/javascript">
</script>
<elevenlabs-convai agent-id="agent_8701kn7p69jaf0frvsvwd6g2sq4e"></elevenlabs-convai>
```

CHECKOUT / BILLING (NOT WIRED YET — PLACEHOLDER LINKS OK)

Stripe Checkout with Stripe Tax is on our side. Each tier CTA should `<a href="#">` for now — we'll send you 8 live URLs (4 tiers × 2 cycles) once the Stripe products exist. Use `data-plan="light|standard|busy|heavy"` and `data-cycle="monthly|yearly"` on each button so we can wire them in a single pass.

ANALYTICS EVENTS TO EMIT (IF YOUR STACK HAS IT)

- `pricing_view` — when the pricing section enters viewport.
- `pricing_cycle_toggle` — `{ cycle: "monthly" | "yearly" }`.
- `pricing_cta_click` — `{ plan, cycle }`.
- `widget_open` — the ElevenLabs widget is launched.

Paste this into your landing-page repo's CLAUDE.md

```
# Kostas — pricing constraints

# Canonical source (DO NOT fork these numbers):
#   https://dashboard-sooty-seven-64.vercel.app/dashboard → Settings → Subscription
#   Ask the Kostas repo owner for an updated pricing-handoff.pdf when promos change.

- 4 tiers: Light €99 / Standard €179 / Busy €299 / Heavy €499 (monthly, EUR).
- Yearly = flat 20% off. Show both cycles behind a toggle, default to Monthly.
- Minutes: 100 / 250 / 500 / 1,000 per month respectively. Hard cap — no overage.
- Badges: Standard = "Most popular", Heavy = "Best value". No badge on Light/Busy.
- Show prices ex-VAT with microcopy "+ tax calculated at checkout".
- DO NOT write "unlimited locations" or "up to X minutes" anywhere.
- DO NOT invent discounts — only the codes in PRICING_JSON.promos.
- The ElevenLabs widget agent id is agent_8701kn7p69jaf0frvsvwd6g2sq4e.
- If pricing here ever disagrees with the live dashboard, THE DASHBOARD WINS.
  Flag the drift and request an updated handoff.
```

What we still owe you

- Wordmark + favicon (placeholder OK until then).
- A 30-second demo recording of Kostas (Greek booking + English booking).
- 8 Stripe Checkout URLs (4 tiers × 2 cycles) once Stripe products are live.
- Testimonial quote from *Greek Barber Festival* after the 4-week pilot.
- Optional: `currencies.json` (hand-rounded prices for all 12 currencies) if you want geo-swap.

Our side: `dashboard/lib/pricing.ts` · `dashboard/lib/currencies.ts` · `dashboard/lib/vat.ts` · app auto-deploys on push to `main`.

Questions: reply on the shared thread and we'll regenerate this PDF with any edits. The HTML source is checked in at `agent/docs/pricing-handoff.html` — fully Claude-editable.
